Keyword Index

Absorbing-scattering medium, 349
Arbitrary curvature ratio, 138
Augmentation and enhancement, 54
Axial-flow pump, 86

Binary alloys, 268
Boundary layer, 316
Boundary layers, 217, 408
Boundary layer theory, 231

Cavity flow, 357
Combined convection, 37
Combined heat transfer, 68
Complete transport equations, 292
Compressible boundary layer, 201
Computation, 146
Computational fluid dynamics, 106, 401
Concentrated heat source, 279
Concentric horizontal annuli, 210
Condensation, 391
Conditional sampling, 223
Conformal mapping, 324
jugate natural convection, 177
Contaminants, 341
Convective drop, 260
Convective heat transfer, 316
Cooling coil, 391
Crisscross motion of vortex, 2
Cross-flow fractions, 76
Cross-flow velocities, 76
Curved pipe, 138
Cylindrical cavity, 155

Dean number, 138
Density inversion, 366
Development of thin film flow, 254
Diesel spray, 301
Diffusers, 401
Diffusion, 341
Distorted flow, 401
Drag coefficients, 231
Drag reduction, 223

Ejectors, 10, 401
Electronic packages, 170

Film condensation, 48
Film cooling, 106
Fin tube heat exchanger, 391
Finite rotating disks, 155
Finite-differencing, 210
Finite-element solution of two-phase velocity and temperature fields, 292
Flat plate, 231
Flow, 185
Flow separation, 54
Flow visualization, 2
Flow in tube bundles, 76
Fluid flow, 155
Fluid suction or injection, 333
Forced convection, 54, 385
Free convection, 279

Heat transfer, 27, 106, 146, 155, 185, 201
Heat loss ratio, 191

Impeded flow, 18
Inclined cavity, 284
Inclined surface, 48
Inducer, 85
Inertial effect, 376
Injection, 341
Integral method, 240
Interacting vaporizing polydisperse droplets, 292
Internal flow field, 86
Internal forced convection, 170
Irradiation, 191
Jet impingement, 246
Jet pumps, 401
Jets, 10

Laminar axisymmetric flow, 292
Large eddy simulation, 210
Laser Doppler velocimeter, 129
Linear stability analysis, 349
Liquid film flow, 254

Mass flux, 385
Mixed convection parameter, 333
Modeling, 10, 106, 301

Naphthalene sublimation, 246
Natural convection, 284, 366, 376
Non-Newtonian fluids, 408
Non-Boussinesq fluids, 366
Non-Darcy flow, 385
Non-Newtonian fluid, 279
Numerical analysis, 2, 18
Numerical model, 48
Numerical simulation, 246
Numerical techniques, 68

Obstruction with a square rod, 2
Optimal control, 349
Optimum fin number, 191

Panel cooling, 94
Partitioned enclosure, 177
Periodic heat transfer, 94
Phase change, 268
Pins, 170
Pipes, 341
Porous coating, 48
Porous media, 279, 284, 385
Porous medium, 376
Porous materials, 268
Pressure drop, 64
Protection, 341

Radiation conduction parameter, 191
Radiation nusselt number, 260
Radiation convection interaction, 260
Radiosity, 260
Reverse flows, 37
Reynolds equations, 164
Rheology, 408
Riblets, 223, 324
Rotating flow, 27
Rotating duct, 240
Rotating eccentric thermosyphon, 18
Rotating tube, 27
Rotating parameter, 333
Rotating or nonrotating bodies, 333
Rotating cavities, 146

Second-moment closure, 164
Secondary flow, 86
Self-induced flow, 27
Separation flow, 129
Shellside flows, 76
Skin friction, 231
Smagorinsky constant, 210
Square duct, 68
Staggered fins, 185
Stagnation-point flow, 408
Strouhal number, 2
Subgrid scale model, 210

Thermocapillary convection, 349
Thin film flow, 254
Thin shear flows, 164
Three-dimensional flow, 106
Transient convection, 357
Transition, 106, 217
Turbine, 106
Turbulence, 10, 223, 324
Turulence model, 129, 316
